JAVA ORE LOOKBOOK

## **JAVA ORE**

### THE SIGNATURE COLLECTION

The Java Ore jewellery range celebrates reinvention and creativity, integrating a beautiful innovative material derived from coffee with silver and gold.

The striking and original designs are inspired by the properties and formation of coffee grounds, uncovering their beauty and transforming them into covetable lasting gems that intrigue and delight.

Clean lines and minimalist aesthetic characterise the range which is handcrafted in London with close attention to quality and craftsmanship. As the pieces are often designed to be stacked or styled in different ways, the collection offers wearers a level of playfulness as well as a deeper connection to the provenance of the pieces.

## ABOUT ROSALIE

Rosalie creates inspirational luxury jewellery with cutting edge sophistication and a clean aesthetic. Her striking designs are influenced by the materials she works with as well as geometric pattern and form she finds in nature. Often asymmetric and angular in structure, many pieces are handcrafted from innovative materials made especially for ROSALIE MCMILLAN in London. Her most recent collection, Java Ore, incorporates a unique material derived from recycled coffee grounds collected in London, transformed into a durable material of remarkable beauty.

Rosalie's jewellery offers a deeper connection with her wearers. As a trained psychologist, Rosalie believes the way jewellery makes you feel is just as important as the way that it looks, placing great importance on the provenance and deeper beauty of her pieces. Often her materials have been transformed and reinvented into playful jewellery that can be stacked together and arranged in many ways according to mood and outfit, and cherished over time as their finish evolves and is personalised. Rosalie hopes this transformation can inspire us to unleash our own potential, to harness our creativity and deeper values in our lives.

Recently shortlisted for an Observer Ethical Award, Rosalie uses sustainable practices and recycled or Fairtrade materials where possible. Five pounds of the sale of each coffee piece is donated to Grounds For Health, an organisation focussed on reducing cervical cancer in the coffee producing countries around the world.

## MATERIALS

**Çurface.** Çurface is a unique material made from recycled coffee grounds collected in London. To make Çurface, coffee is mixed with oils before undergoing a specialised production process using heat and pressure. Çurface has a beautiful surface quality and texture and has surprising strength and durability, with similar properties to a hardwood.

**Metals.** Rosalie uses recycled sterling silver where possible in her jewellery. As a Fairtrade registered goldsmith, Rosalie is able to make most of her collection in 18 carat Fairtrade gold.

**Other.** Rosalie uses sustainable, non-toxic or recycled materials and practices where possible in her jewellery, packaging and stationery. The electricity for her business is derived from renewable sources.
